

Tool Installation Guide

To ensure proper functioning of the framework, the following tools must be installed:

Tool	Category	Installation Command (Debian/Ubuntu)	Function in Script
fpdf2	Python Lib	pip install fpdf	Generates the final PDF report
whois	Passive	sudo apt install whois	Checks domain registration & ownership
dig	DNS	sudo apt install dnsutils	Performs deep DNS & DNSSEC queries
nslookup	DNS	sudo apt install dnsutils	Standard DNS name resolution
host	DNS	sudo apt install host	Quick DNS/IP mapping lookup
subfinder	Discovery	go install github.com/projectdiscovery/	Fast subdomain discovery via APIs
assetfinder	Discovery	go install github.com/tomnomnom/assetfinder	Finds related domains and assets
whatweb	Web Tech	sudo apt install whatweb	Identifies CMS, plugins, and tech stack
curl	Web	sudo apt install curl	Fetches HTTP response headers
wget	Web	sudo apt install wget	Fallback for server header analysis
nmap	Scanning	sudo apt install nmap	Scans the top 5,000 ports for open services
